

When will you start installing Geberit HDPE drainage systems...

Geberit HDPE is establishing itself as the preferred choice amongst many UK mechanical services installers due to its unique features and benefits, some of which include:

- Lightweight and easy to install
- Avoids the use of solvent welds and liquid cleaners on site
- Innovations such as the soil manifold that reduce ring seal joints in a system
- Outstanding impact resistance at both low and high temperatures
- Is ideal for on or off site prefabrication due to its high durability
- Excellent UV stability.

...and start benefiting from our know-how?

KNOW HOW INSTALLED

Geberit HDPE is the total solution for all types of drainage including above and below

ground, and chemical waste. It has a wide temperature range, is impact, crush and abrasion resistant and is insoluble in most chemical compounds.

With two main homogenous jointing methods, electrofusion and fusion butt weld giving excellent joint integrity, and other jointing methods available, you can be sure that Geberit HDPE can provide the right solution for any installation requirement.

Geberit Silent-db20, a hybrid HDPE material, utilises the electrofusion joint method to provide a fully welded noise reducing drainage system with outstanding acoustic properties. With the added benefit of significantly reduced ring seal joints, thicker material, ribbed fittings and noise absorbent brackets, it's the reliable and quiet system for all residential and commercial buildings.

In short, no traditional commercial drainage material can provide the strength and integrity of a metal system with the low weight and ease of installation of a plastic system across such a wide range of applications.
