

## GEBERIT BIM PLUG-IN

# REVISED NEW FUNCTIONS, FEATURES AND NEW PRODUCTS

### RELEASE OCTOBER 2024

A maintenance update for the Geberit BIM plug-in is now available to download. Plug-in users will be notified that a new version is available by a pop-up message in the software.

## GENERAL NEWS

### USER REGISTRATION DIRECTLY IN THE GEBERIT BIM PLUG-IN

New users or users with an expired Geberit BIM plug-in licence can register for a new one right from the tool. After registration, the user will receive an email with a key code which will provide free access to the Geberit BIM plug-in catalogue and assistant module.

### GEBERIT BIM PLUG-IN NOW SUPPORTED IN REVIT 2025

The Geberit BIM plug-in, version 2.9, is supported in the following Autodesk® Revit® versions:

- 2023
- 2024
- 2025

\* Revit 2022 users should not update the Geberit BIM plug-in if they wish to continue using it

\* Revit 2022 will no longer be supported after six months.

### NEW VAT RATE FOR FINLAND

VAT is added automatically when calculating the cost of material and installation. With the new release, the new VAT rate for the Finnish plug-in will be 25.5 %. Users are required to manually check this rate when opening projects. A warning will inform the user if the project's VAT rate is different.

### FIND YOUR PRODUCTS FASTER

Add your favourite and most-used products to the new category, Favourites. Keep your most-used products together to avoid having to search for them.

### EASY GEBERIT DUOFIX SYSTEM CALCULATION

The function for calculating the Geberit Duofix system in the installation module is now available in more market versions of the Geberit BIM plug-in, producing detailed material lists with automatic visualisation to assist with the installation process.

## NEWS IN THE INSTALLATIONSSYSTEM MODULE

---

### ADDED UNIONS REMAIN AFTER REGENERATION

Electrofusion or butt-welded fittings that have been added to the system will be re-used during the calculation regeneration process. This means it is no longer necessary re-add and re-adjust the fitting positioning, which helps to provide a more accurate design in accordance with the material list.

---

### DEFINE NON-CUSTOM ANGLE DESIGNS IN ENABLED PROJECTS

If you have enabled the allow custom angles on horizontal bends in the document settings tab, you can now change this pre-defined option on an individually basis within the calculation settings if you do not wish to have custom angles implemented. This allows for more flexibility.

### FIND LOCAL PRODUCTS IN THE CATALOGUE

The Download centre in the Geberit BIM plug-in has been updated and is now market-specific. Extra content that is not available in a product range will no longer be displayed.

---

### MORE CONTROL FOR LABELLING ELEMENTS

There is now more control of labelling your design for prefabrication planning. You can now select the whole system or sections of the system to be labelled.
